

Python 3 Workshop

3d day – Final Project

Q1/ Do the following

1- make simple python file called ('funds.py') which can generate new folder called ('My project').

In my project make python files which excute:

2- generate new txt file inside the folder above and name it ('test.txt') and write 'Hello python' in it.

3- rename the file ('test.txt') to ('code.py')

4- copy the file('code.py') as ('iraq.txt') in new folder called ("good")

5- remove folder("good") with its files

Q2/ Make:

1- files has class Employee that has (fullname , age, IsActive, dept) with (self method to enter the class data). + inherited class with (salary , address) info

2- module file to do:

a) function (read all employee info)

b)find if the age of emp. Beggar than 20 or smaller than 50 otherwise print (refused age)

b) function to find if there is brothers of three employees.

e) function to make txt file carries the emp name and has all his info inside it.
